

# YOUR BODY

Do you ever wonder what's inside of your body, underneath your skin? Sure, you've got lots of muscles that make you strong, what else?

Your body has bones, blood, veins, and organs inside. Your organs don't play music—they make your body work. Your heart, lungs, stomach, and liver are all organs.

Bones, muscles, and skin are found all over your body. Can you find your heart, your lungs, and your stomach? Where are your bones and veins? What else do you see inside your body?
