

WAKEMED IM RESIDENCY

Practice medicine in a community-based setting with great academic affiliations to support your growth as a physician

Program Director: John Perry, MD, MS

YEARS OF GME EXPERIENCE

WakeMed is planning to launch its own sponsored residency program in 2021. However, WakeMed has served as an Internal Medicine GME teaching site for over 45 years. We have had the good fortune of longstanding & ongoing academic affiliations with UNC and more recently with Campbell University. We are no stranger to GME!

SHAPE YOUR FUTURE

This program is designed with a 4+2 curriculum, which allows residents to spend focused time in their continuity clinics at least every four weeks. In addition, twenty-four weeks of time are dedicated through the 3-year program to elective exploration, allowing you to shape your future.

PERSONALIZED TRAINING

WakeMed's Internal Medicine Residency program will train five residents per year, with fifteen at full complement, assuring that each resident will get individualized attention from program faculty as well as great learning experiences.

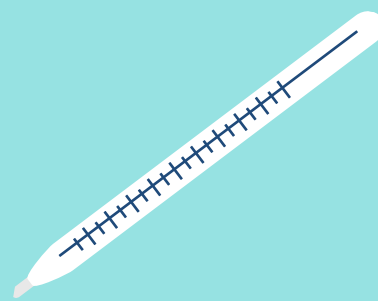

COMMITMENT TO COMMUNITY

WakeMed takes its mission as a safety net hospital for the Raleigh/Wake County community very seriously. An important part of the residency program will be the care of the WakeMed community, including the urban underserved.

HEART OF NORTH CAROLINA

WakeMed is located in the heart of Raleigh, which is North Carolina's capital city. Raleigh and the Triangle area offer a wealth of culture, food and fun, with miles of trails for outdoor enthusiasts and tons of exciting restaurants for foodies! Raleigh is also halfway between the beach and the mountains-- an ideal living situation for anyone!

FACULTY AFFILIATIONS

Due to WakeMed's close affiliations with local medical schools, many of the Internal Medicine attending physicians have faculty appointments at nearby universities-- assuring incredible connections to powerful academic institutions!

SIMULATION CENTER

WakeMed's Medical Simulation Center has won awards for its excellence. It is an important part of a robust didactic curriculum that allows residents to practice their skills with point of care ultrasound, code simulations, and uncommonly encountered situations or ones that are best learned in a controlled environment.

OUR MISSION

To train compassionate general internists to provide evidence-based care without regard to the patient's race, gender, sexual orientation, disability status or ability to pay by providing timely, innovative, excellent and value-based patient care; promoting the health and wellbeing of our community; and translating new knowledge into meaningful improvements in patient health outcomes and safety.
